

USING THE TRIANGULAR BANDAGE

Eye Bandage—Put dressing over eye, then fold triangular bandage into narrow cravat. Tie around head, holding dressing in place. To prevent other eye from being covered, a second cravat or strip of gauze may be used as shown.

Head Bandage—Dress the wound. Spread out triangular bandage. Make a 1 1/2" fold along long edge. Place this fold over forehead, close to eyebrows. Bring ends around head, tie them. Tighten point in back, then tuck it in neatly.

Hand Bandage—Place patient's hand, after wound has been dressed on triangular bandage, wrist at long edge. Fold point over, wind long ends around wrist and tie them with square knot. Tuck in ends and point of triangle.

Chest Bandage—Tie point of bandage and one end around waist. Use handkerchief to fasten the other end.

Shoulder Bandage and Thigh Bandage require two bandages, one to hold dressing, the other as anchor.

Knee Bandage—Hold dressing in position with long edge of bandage. Wind ends around thigh, fasten together with square knot. Tuck in ends.

Foot Bandage—Put dressing on wound. Place foot on middle of bandage. Cover foot with point, wind ends around it, tie them together. Tuck in ends.
